

## **Swift - JB Bulletin**

Dear Valued Customers and Distributors,

As part of Liquip's ongoing product reviews, we analyse information received from products in the field and implement improvements as applicable.

The Swift-JB is a stainless-steel junction box suitable for installation in hazardous areas and is commonly used in installations of the Liquip Swift Delivery system.

After reviewing feedback relating to the Swift-JB housings, Liquip requests its affiliated service repair workshops to conduct an inspection of Swift-JB housings during scheduled preventative maintenance.

This inspection should observe no liquid ingress. If liquid is found in the Swift-JB junction box please contact your Liquip representative for further details to resolve this matter.

Regards, Liquip
